## DETAILED ACTION

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 1-5, drawn to a battery separator comprising a tri-layered film
    having a polypropylene-polyethylene-polypropylene structure, classified in
    class 429, subclass 249.
  - II. Claim 6, drawn to a battery separator comprising a multi-layered film where one layer is substantially polypropylene and another layer being substantially polyethylene, classified in class 429, subclass 129.
  - III. Claims 7-28, drawn to a method of making a separator comprising extruding and winding the first precursor film; extruding and winding up a second precursor film; unwinding; stacking, laminating, winding, etc. classified in class 429, subclass 142.
  - IV. Claims 29-31, drawn to a method of making a battery separator comprising extruding a precursor film; laminating together precursor films stacking up at least twelve multi-layered precursor films, classified in class 429, subclass 145.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the

Application/Control Number: 10/636,115 Page 3

Art Unit: 1745

different inventions are unrelated because they are not disclosed as capable of use together and have different designs such that Group I requires a tri-layered film having a PP-PE-PP structure having a thickness of less than or equal to 25 um versus Group II requires only having 2 layers one being substantially PP and the other layer substantially PE and the film thickness of less than or equal to 15 um.

- 3. Inventions III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are not disclosed as capable of use together and have different effects such that Group III requires extruding and winding up two precursor films versus Group IV requires extruding one precursor film, laminating films and stacking up at least 12 multi-layered precursor films.
- 4. Inventions I, II and III, IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are not disclosed as capable of use together and have different effects such that Groups I and II require individual layers of the film that are bonded together to have a peel strength of greater than 40 g/in and a thickness of less than 15 um versus Groups III and IV which do not require this limitation.
- 5. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/636,115

Art Unit: 1745

6. A telephone call was not made due to the complexity to request an oral election to the above restriction requirement, therefore an election has not been made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura S. Weiner whose telephone number is 571-272-1294. The examiner can normally be reached on M-F (6:30-4:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
